Websense Data Security Solutions

What is your confidential data and where is it stored?

Who is using your confidential data and how?

Is your confidential data secure?

Protecting customer and other confidential data from malicious and accidental leaks is one of the top business and IT security challenges facing organizations today. Whether it's customer records or intellectual property, information is the lifeblood of today's enterprise. Today's CIOs invest in technologies to make this data available on demand to employees, customers, and partners. But broken business processes, employee error, and gaps in security often put this data at risk—risk from regulatory and corporate compliance, customer and competitive pressures, and the rising cost and publicity of data leaks.

But what if you could...

- Discover where confidential information is stored throughout the network.
- Monitor where sensitive data travels in and out of the network.
- Protect confidential data and information from misuse.

With Websense you can protect your data

Your internal network contains a surprising amount of sensitive and proprietary information, and more organizations are falling victim to high-profile data leaks. The majority of data leaks are accidental or unintentional, but any leak has the potential to be devastating and the losses can be significant. Data leaks can be prevented and the enterprise kept safe, without inhibiting business.

Websense ThreatSeeker Network

The Websense ThreatSeeker™ Network adaptive security technology uses more than 50 million real-time data collecting systems that continuously monitor Internet content—including new and dynamic content—for emerging threats. The Websense ThreatSeeker Network feeds this intelligence into its Web security, messaging security, and data loss prevention solutions. As a result, Websense is able to adapt to the rapidly changing Internet at speeds not possible by traditional security solutions and basic email filtering solutions. The ThreatSeeker Network dynamically classifies structured and unstructured data to enforce data standards and regulations and prevent loss of sensitive data on internal endpoint systems.

The ThreatSeeker Network:

- Analyzes more than 40 million Web sites per hour
- Assigns reputation to more than 2 million domains, networks, IP addresses, and hosts every hour
- Scans nearly 10 million emails for unwanted content and malicious code every hour
- Captures more than 10 million unsolicited spam, phishing, or exploit campaigns every day

The Websense Approach to Data Security

Websense® enables business while securing an organization's essential information. Websense Data Security Suite protects against data loss by quickly analyzing data and enforcing policies automatically whether users are on the network or offline.

Websense offers the leading Data Loss Prevention (DLP) solution designed to protect customer information, intellectual property, and enforce and report on regulatory compliance. Through our patented PreciseID™ technology, Websense automatically discovers confidential data, monitors its use, and enables administrators to create and implement content enforcement policies.

Websense Data Security solutions are available in the Websense Data Security Suite* which is comprised of four, fully-integrated modules that can be deployed based on customer need:

Websense Data Discover – Discovers and classifies data distributed throughout the enterprise.

Websense Data Monitor – Monitors who is using what data, and how.

Websense Data Protect – Protects data with policy-based controls that map to business processes.

Websense Data Endpoint – Extends data security to the endpoint with integrated management and reporting.

Websense Data Security Suite is the only data loss prevention (DLP) solution that provides content, context, and destination awareness, allowing administrators to manage *who* can send *what* information, *where*, and *how*.

Websense Data Security Suite includes an advanced policy framework to intelligently map data policies to business processes for protection on the network and at the endpoint. It includes a powerful policy platform to enable business and secure data. This unique capability provides visibility and control for managing *who* and *what* go *where* and *how*.

* All Websense Data Security products require Websense Premium Support unless otherwise approved.

Who	What	Where	How
Human Resources	Source Code	Benefits Provider	File Transfer
Customer Service	Business Plans	Internet Auction	Web
Marketing	Employee Information	Business Partner	Instant Messaging
Finance	M&A Plans	Blog	Peer-to-Peer
Accounting	Patient Information	Customer	Email
Sales	Financial Statements	Spyware Site	Network Printing
Legal	Customer Records	North Korea	
Technical Support	Technical Documentation	Competitor	
Engineering	Competitive Information	Analyst	

Websense Data Security Suite provides controls to manage *who* can send *what* data *where*, and *how*.

“Through 2010 we expect sensitive information leaks to be primarily unintentional, accidental, or the result of poor business processes.”

Paul Proctor,
Research Vice President,
Gartner

“With Websense Data Security Suite, we can accurately identify any communication containing PII or source code, and route it for encryption.”

CISO,
SallieMae Inc.

“Fifty percent of organizations start with the network (data in motion), 25% lead with discovery (data at rest) and approximately 25% start with a content-aware endpoint.”

GARTNER:

Develop an Enterprise Strategy for Content Monitoring and Filtering/Data Loss Prevention, 2008

Data Security Products

Websense Data Security Suite

Websense Data Security Suite prevents data loss, manages compliance, and secures business practices. Each of the four integrated modules provides unparalleled visibility into communications, compliance auditing, and the risk of data loss.

- **Visibility.** Websense Data Security Suite’s advanced policy framework intelligently maps data policies to business processes, enabling business and securing data—providing visibility and control over managing *who* and *what* go *where* and *how*.
- **Detection Accuracy.** Through PrecisID technology, combined with the powerful Websense ThreatSeeker Network, Websense Data Security Suite accurately identifies and classifies data, both on the network and at the endpoint.
- **Solution Coverage.** Websense Data Security Suite monitors all types of data on the network and at the endpoint, securing data regardless of format or location.
- **Management and Reporting.** Centralized management and reporting provides easy tools to analyze, track, remediate, and report on policy violations.

Websense Data Discover

The explosion of information faced by all companies means you often don't know what data is confidential or where it is located. Websense Data Discover provides agentless network and data discovery to efficiently find the location of confidential information—on laptops, desktops, file servers—and classify it. Websense Data Discover provides situational awareness of data stored throughout the organization to support data security policies, and can be purchased alone or deployed as part of the fully integrated Websense Data Security Suite.

Websense Data Monitor

Websense Data Monitor provides enterprise-wide monitoring of all internal and external business communications, email, network printing, FTP, HTTP, HTTPS, IM, and more. Websense Data Monitor helps organizations audit business processes with an advanced policy framework that identifies *who* is sending *what* data *where*, *how* they are sending it, and provides actionable intelligence to reduce the risk of data loss and manage compliance.

Websense Data Protect

Websense Data Protect includes Websense Data Monitor and provides built-in, automated policy enforcement to secure *how* and *where* data travels. It is the only data loss prevention solution with native enforcement for in-line protection of SMTP and HTTP traffic. With Websense Data Protect, organizations can employ enforcement actions such as blocking, quarantining, forced encryption, and notification, in addition to a powerful set of incident management tools to prevent data leakage, improve business processes, and manage compliance and risk.

Websense Data Endpoint

Websense Data Endpoint extends data security to the endpoint, including the ability to discover, monitor, and protect data whether the user is on or off the network. It includes fingerprinting and policy templates for data identification and can prevent data loss even if the user is offline for such channels as USB devices, printing, IM, and for such actions as copy/paste, print screen, and more.

The capabilities of Websense Data Security products can be extended with these optional Web Security add-on modules from Websense:

Websense Web Security Gateway

Websense Web Security Gateway analyzes and secures your Web traffic in real-time, enabling safe use of the latest Web 2.0 sites and tools. Consisting of the Active Security Module and Content Gateway Module, the Web Security Gateway adds on-premise, proxy-based content analysis of Web and SSL traffic to the robust Websense Web Security and Web Filter platform. This allows instant categorization of new sites and dynamic content, while proactively discovering security risks and blocking dangerous malware.

Websense Web Filter

Websense Web Filter is the world's leading solution to improve employee productivity, decrease legal liability, and optimize use of network resources. The solution allows for customized policies to meet specialized needs and minimizes administrative overhead with an intuitive Web-based GUI and flexible integrated reporting. In addition to controlling access to Web sites, Web Filter provides policy-based control over more than 100 network protocols, protecting you from blended security threats and bandwidth drains.

The Company Behind the Solutions

Websense is a leader in integrated Web, data and email security, protecting the essential information of more than 42 million people around the world. Websense software and hosted security solutions help organizations block malicious code, prevent the loss of confidential information and enforce Internet use and security policies.

After 15 years of Internet experience, nobody knows the Web like Websense. Websense has unprecedented visibility into the internal and external movement of information in the Web 2.0 world with knowledge of:

- **Who** is authorized to access Web sites, content, or applications
- **What** data must be protected from leaks
- **Where** users can go online and sensitive data can be sent
- **How** sensitive data can be communicated and online resources can be used

Websense provides unparalleled protection by means of the ThreatSeeker Network—the technology foundation for Websense Web, data, and email security solutions. The ThreatSeeker Network provides the intelligence that underlies Essential Information Protection™ by delivering real-time reputation analysis, expanded behavioral analysis and actual data identification.

Learn more about Essential Information Protection, the ThreatSeeker Network, and the entire line of Websense solutions at www.websense.com. Say Yes to Web 2.0 with Websense.

Websense Provides Leading Global Technical Support

Websense offers three levels of support tailored to the needs of customers:

- **Websense Mission Critical Support**—includes Premium Support, plus access to a dedicated technical account manager (TAM) who provides one-on-one strategic support planning and more.
- **Websense Premium Support**—includes Websense Standard Support with extended 24/7 support, 365 days a year, and priority call access and email support.
- **Websense Standard Support**—provides all customers with phone and email support during business hours, plus unlimited access to the MyWebsense Web portal and Knowledge Base resources.
